

Seismic Mount for Data Centers

(Isolation up to 2g)

Protecting Critical Data from Seismic Activity

Acceleration destroys hard drives even at 0.5g level. Downtime is measured in \$ Millions.

No system restraint

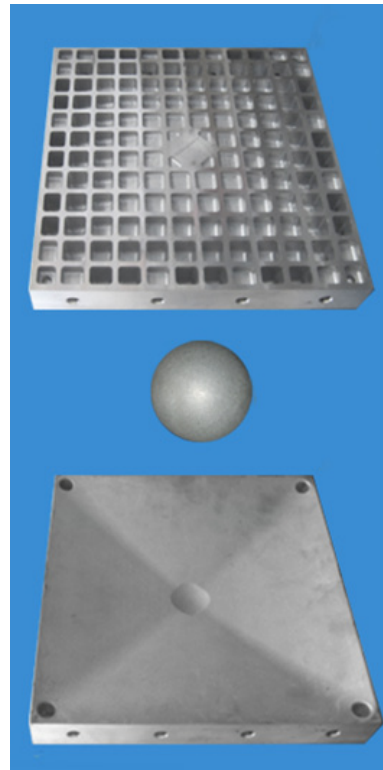

Anchoring the enclosure is worse

THEN

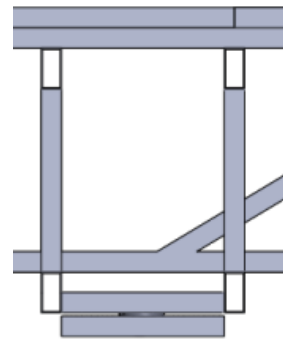

NOW

Vintage isolation platforms work up to 1g.

The **Seismic Mount** works up to 2g today.

The **best solution today** is the isolation access floor using two-way frame on **Seismic Mounts**.
